ENRICH YOUR WATER WITH NANO NATURE WATER FILTRATION SYSTEM

IN LIFESTYLE & TECHNOLOGY / BY VALENTINO BASSWARA / 28 MAY 2013 / 0 COMMENTS

Here are two quick facts about water that you probably already know:

- i. About 70 per-cent of the earth is covered with water.
- ii. About two-thirds of our body is made up of water. Thus, it is essential for keeping us hydrated and is vital for cells and organs to function and regenerate.

But did you know that less than 1 per-cent of the earth's water is suitable for immediate drinking? It has to be purified and desalinated before it becomes safe for human consumption.

In Singapore, the highly effective filtration system together with the addition of chlorine concentrate, removes from water substances that may be harmful for our body. However, the same filtration system also removes minerals which are also beneficial, without removing sediment or rust.

Thus Tupperware has delivered the **Nano Nature Water Filtration System**, which transforms water from the tap into safe and mineral-rich potable water through three automated stages.

Stage 1: Filtration

Instead of a normal non-pleated filter, there is a patented pleated nano-ceram filter, which provides three to four times more filtering surface area and absorbs sub-micron contaminants such as bacteria and viruses that would pass through ordinary filters.

Stage 2: Purification

An activated carbon block filter removes volatile organic compounds, heavy metals, chlorine, waterborne parasites, and organic and inorganic chemicals. All without affecting the existing beneficial minerals present in the water. During this stage, the water clarity and taste are also improved.

Stage 3: Enhancement

This stage utilises a special healing stone, the Bakuhan-seki that has been used in Japan for thousands of years to maintain good health. Water treated with Bakuhan-seki was found to have increased mineral content for up to 19 beneficial minerals, and increased pH value.

Compact with a contemporary design, this powerful filtration system requires no electricity. It also has certification from the Natural Sanitation Foundation and the Water Quality Association.

Nano Nature Water Filtration System retails at S\$1228. It can be purchased in Singapore at 85 Defu Lane 10, #01-00, Singapore.
